REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

While German document number 199 36 742 A1 shows a driving gear including first and second gears each having variable reference diameters which fluctuate in a circumferential direction between a minimum value and a maximum value, they are not coupled to the chain wheel drive shaft of a chain wheel coupled to the steps or pallets of an escalator as required by the independent claims. The determination of whether preamble recitations are structural limitations or mere statements of purpose or use "can be resolved only on review of the entirety of the [record] to gain an understanding of what the inventors actually invented and intended to encompass by the claim." *Corning Glass Works*, 868 F.2d at 1257, 9 USPQ2d at 1966. While recitations of intended use in the preamble of a claim do not necessarily limit the scope of a claim, here the preamble breathes life into the claim because the chain wheel drive shaft structure of the preamble is again recited as a limitation in the body of the claim. Furthermore, applicant's arguments that the present invention is not anticipated by the German document because it "does not show a drive device for escalators or moving walkways as required by the claim" is further evidence that the inventor intends the claims to encompass only a device for driving steps of an escalator or pallets of a moving walkway and not a more generalized drive device. Furthermore, it would not have been obvious to one of ordinary skill in the art at the time of the invention to use the driving gear of the German document to compensate for the polygonal effect in an escalator because the driving gear of the German document is used in the nonanalogous art of drive device for a drawing machine for tubes, rods, or the like.
